  - Would need to re-register

Class chat page

- Shows the running conversation
- Text box allows users to write their message
- Attachment link allows users to attach images to the class
- Each message shows up with users' username or nickname

This app is fairly straightforward. New users must register and follow the verification link sent to their email. They then can login and view open chats. On this page they may also create new chats, view who is online, logout, or view their profile settings. To create a new class chat simply click create, type in a class name and hit okay. The class will then show up to the users on the home screen. To view who is online a user simply clicks on the number in the upper left hand corner of the screen and a list of online users' emails will appear. The logout button does just that, logs the current user out and returns to the login/register page. Clicking on the profile link leads the user to see their current username/nickname, their email address, and allows them to delete their account if the desire to. The user will also be able to click on a class and view the chat history and participate in the chat with other users.
